(54) Title: METHOD FOR REMOTE DIRECTING OF WWW-BROWSER

(57) Abstract: The content of the invention is a method, by which it is possible to remotely, for example within phone-contact range, change the www-document (104) displayed on the www-browsers (108) of one or more clients, with a controller window (102) on the controller's own www-browser (101). According to the invention, the controller instructs the clients to choose a particular www-document (104) residing in a server (100) used by the controller; said document being maintained by a server-side program (103) which can be commanded by the controller to embed URLs in the said www-document. As a result of the actions of the program, the clients' www-browsers display the document (110) specified by the URL given by the controller. This is achieved by having the clients' www-browsers update its state from the server, causing the displayed page to be refreshed, according to the controller's choice.
